DETAILED ACTION

Claim Objections

Claim 46 is objected to because of the following informalities: In line 5, the term “and” (first occurrence) should be “an”. Appropriate correction is required

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 36-64 are rejected under 35 U.S.C. 112, first paragraph, as based on a disclosure which is not enabling. The connective structural relationship of the elements regarding the timing of the knitting, drafting apparatus and twisting is critical or essential to the practice of the invention, but not included in the claim(s) is not enabled by the disclosure. See *In re Mayhew*, 527 F.2d 1229, 188 USPQ 356 (CCPA 1976).

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 38, 39 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

An “unconventional yarn” is indefinite as it is to what is conventional as opposed to unconventional

Claim Rejections - 35 USC § 102

Claims 36-41, 44-50, 52, 54, 57-59, 62-64 are rejected under 35 U.S.C. 102(b) as being anticipated by British patent document 1538924.

British patent document 1538924 teaches the invention as claimed including continuous yarn material (212) is fed into a knitting point (at needles 22, 24) of the knitting machine and pressed into loops at the knitting point, and wherein the yarn material is obtained such that a continuous fiber band is at first drawn in a drafting device and then provided with twists in a spinning device (via false twist) and that the fiber material thus produced is directly fed into a knitting point.

Concerning claim 39, twist inherently adds strength to untwisted fibers. British patent document 1538924 also teaches a knitting machine having knitting needles (22, 24) and at least one knitting point for processing a continuous yarn material (212) fed to it into loops and a means for feeding the yarn material wherein feeding means contains drawing equipment for drawing and endless fiber band and a spinning device (22, 23; 26, 29) located between the drawing equipment (14) and the knitting point (16) and serving for providing the fiber band (5) with twists.

Allowable Subject Matter

Claims 42 and 43 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
